

### ✘ THE PROBLEM

The efficiency of traditional small and medium size motors or generators does not exceed 70%. Wire wound stator remains the most unreliable element.

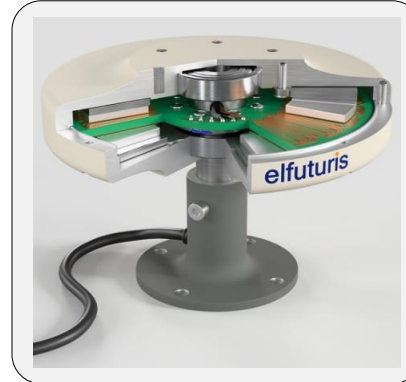

### ☀ THE SOLUTION

Axial flux machine + PCB stator winding with innovative topology by Elfuturis resulting in:

- efficiency rate above 80%
- outstanding reliability of the PCB winding

### 👍 THE PRODUCT

0.3 – 3.0kW range of air-core axial flux generators with modular stacking structure and PCB stator winding with proprietary topology • increased efficiency to over 80% • ultimate reliability • reduced dimensions • current application – generator for wind turbines, but not limited to this in the future
