

alquira

Alquira helps farmer associations prepare subsidy applications faster, with less manual work and fewer errors.

Problem

Small farmers in Portugal depend on EU and national subsidies, but accessing them requires **complex bureaucracy**, fragmented data, and strict deadlines. Many older rural producers rely on local farmer associations, whose technicians are **overloaded with documents**, portals, spreadsheets, and changing rules.

Solution

Alquira gives association technicians a **smart workspace** to collect and organize farmer data, identify missing information, prepare pre-filled applications, and reuse records for future subsidies. Technicians remain in control while repetitive and search-heavy work is reduced.

Vision

We start with subsidy applications, but our vision is to become **the trusted digital operating layer for small farms**, helping farmers and associations manage funding, compliance, livestock monitoring, and everyday decisions with less bureaucracy.
