Proposta de Valor: Democratizing access to clinical excellence through unlimited, realistic consultation simulations and immediate objective feedback, drastically reducing costs and risks for patients, and improving soft skills in students.

Descrição: 1,500+ students enter medical school annually (Portugal), facing a critical lack of practice due to 1:>20 tutor-student ratios. We propose a platform that gives all students the opportunity to train without depending exclusively on tutor/patient/actor availability. SIMU is a web platform featuring AI-driven (LLM) virtual patients, with adaptive personalities, for immersive consultations (voice/text). It enables unlimited training in history taking and diagnosis with objective, 24/7 automated feedback. Validated at FMUC with a 5% grade increase, it offers a ~95% cost reduction compared to human actors.

Final: Artificial Environment. REAL Experience.
